1. Introduction and Methodology.

Introduction

This Inventory of the buildings, structures and archaeological remains within the historic harbour of Hayle is submitted in support of the Outline Planning Application for the development of the Hayle Harbour, made on behalf of ING RED UK (Hayle Harbour) Ltd.

The report draws on previous work undertaken by the Cornwall Archaeology Unit, culminating in the Hayle Harbour Historical Assessment executed by Nick Cahill and the Unit in July 2000. That assessment, which covered the whole of Hayle, included an extensive inventory. This, and the gazetteer that was produced as part of the Conservation Management Pan 2006, form the basis of ING’s Historical Report, augmented with further research and walk-about survey.

The area covered is that defined by the ING Outline Planning Application red line boundary plan, reference Figure 1.

Structure of Report

The inventory commences with reference to common historical features found throughout the Hayle Harbour area. (Section 2)

Section 3 reports on specific features within the harbour and is structured to reflect the geography of the Harbour as follows:

3.1 Carnsew Quay (prefix CQ)
3.2 South Quay (SQ)
3.3 Penpol Creek and Pool (PC)
3.4 East Quay (EQ)
3.5 Merchant Curnow’s Quay (MCQ)
3.6 Swing Bridge (SB)
3.7 North Quay (NQ)
3.8 Cockle Bank (CB)

Section 4 indicates the sources of information used and Section 5 includes charts locating each of the features.

Grid References

All Grid References are taken from the 2005 copy of the OS site plan at 1: 1250, except where there is a possible archaeology site identified by the Cornish Archaeology Unit.

However where there is seen a need to cross reference with the Cornish Archaeology Unit’s work the SLR report uses its own grid reference in preference to the Unit’s, where the Unit’s reference to more than one individual site, where we have centred the reference.

Text References

The numbers at the reference points refer to the material outlined in Sources
There have been a number of meetings with local historians and their comments have been mentioned in the text where there is no corroborative evidence from other sources. This is not to doubt those historians but is merely prudent scholarship.

The inventory makes reference to the significance of the features listed and their baseline condition the criteria for these references is laid out in Tables 1 and 2.

</table>
2. Common Features.

There a number of common features of harbour furniture that reoccur throughout the harbour. These are illustrated below with an explanation of how they fit into workings of the harbour. Some of these features are so common, such as ladders, that they are not specifically mentioned in the Section 3.

2.1. Bollards

There are a number of bollards on the dockside the oldest type being made of granite there is at least one made of wood. All the bollards are plotted on the gazetteer map; the granite type and one example in wood also have a separate entry and photograph. This type of mooring is associated with the larger vessels that once dominated the trade in the harbour. None of these structures are listed. The one illustrated right is a common type found around the docks and is part of a mine riser – pipe of bolted parts attached to a pump and used to draw water out of the mines. These pipes are about 9 foot in length and were cast at the Harvey Foundry.

2.2. Warping Posts

There are two granite posts that are over a metre high and might well have been used as warping posts rather than bollards; one lies on the bank of Penpol Creek Pool. The position of one or two of the other granite posts, although not a metre high, suggest a similar purpose. There are two other surviving warping posts standing at each end of the Cockle Bank – these are wooden mounted with chains and hooks. The need for these posts arises from the difficulty of manoeuvring a sailing ship within such a restricted harbour. There are separate entries for these features.

2.3. Rings, Chains and Hooks

There are numerous means of securing ships and boats to the quays, rings, chains and hooks. Many of the heavy duty ones probably date from the days of larger vessels many have been added over the years of the use of the harbour. They are so common that none have been plotted on the map or mentioned among the gazetteer entries.
2.4. **Ladders**

All the old quayside ladders have been replaced by 64 modern aluminium alloy ladders, about the same number of the old. Many of the old ladders were in bad condition and becoming unsafe there was also a couple of wooden ladders which had come to the end of their useful life. Leaving them in place was regarded as a serious Health and Safety hazard. Some of the old ladders are lying about the docks; some are finding a new life – one at least as a plant frame. None of the new ladders are recorded nor where the old ones were positioned – the position of the new is close to that of the old. Our picture shows an old ladder on the east Quay.

2.5. **Steps**

There are a number of sets of stairs let into the wharf side, often on the knuckle of the wharf. These are associated with the working of small boats, such as rowing boats, rather than larger sea-going vessels. They are usually sited on the ends or corners of Quays to ensure that they do not interfere with the mooring of the cargo carrying ships and boats.

2.6. **Railway Lines**

There was an extensive railway network on the quays and wharves of the harbour. Much of the lines systems are still in situ and visible – in places border markers such as that at North Quay are made out of old railway track. Some of the fishermen are using rail ties as weights for lobster pots etc. There is a plot of the extent of the rail system and mention within the body of the gazetteer in one or two specific cases but on the whole there is no systematic recording – the most extensive survival is on North Quay. There is no doubt more will be found when work begins on refurbishment.
2.7. Scoria Blocks

Possibly a unique feature to Hayle is the use of scoria blocks for building. Scoria is the lumps of the slag from the copper smelting moulded into rectangular building blocks. This appears to have been done exclusively by the Copperhouse Company and therefore where ever it is used one assumes CCC work. These blocks were used for quay walls, roadways, steps, and buildings and are to found all over the harbour and Copperhouse. There is even an example of its use at Grigg’s Quay at the St Erth end of the Causeway.

2.8. Loading Shoots Slots

There are a number of examples of ‘slots’ created in the quay wall probably to take loading shoots. These appear to be almost exclusively on the Penpol side of the South Quay but there is one other surviving example on the Carnsew Quay. The gap in the quay side wall is approximately 1.5 metres.

2.9. Training Walls.

Channels in the harbour were partially kept clear of silt and sand with a force of water created by the retaining of tidal water and releasing it under pressure the direction being determined by training walls. These walls are usually curved to give this desired direction. All the Training walls that exist are subject to a gazetteer entry.
3.1. Carnsew Quay

| Structure: Carnsew Timber Store |
| Location: Carnsew Quay          |
| Grid Ref: SW 5563 3721           |
| Statutory Protection: Within Conservation Area. |
| Our Ref: CQ1                    |
| CAU Ref: 45                     |

**Structure Type:** Building

**Dates:** C late 19th century with additions

**Description:** The roadside wall and that to the south are irregular stone block walls, probably originally just retaining walls, standing to a height of just over 2 metres, this is topped with a brick ventilated brick wall which together with the timber roof structure were added in about 1900. There is a round glazed addition at the north end, probably as a shop front added in the late 20th century.

**Photographs**

<table>

<tbody>
<tr>
<td>DSCN 2391</td>
<td>Store looking SW</td>
<td></td>
</tr>
<tr>
<td>DSCN 2392</td>
<td>Ditto looking NE</td>
<td></td>
</tr>
</tbody>
</table>

**History:** Built as a timber store between 1877 and 1907 (map evidence) is now partly occupied by Jewsons the Builders Merchants – part of the south end occupied by a Diving Company. The Carnsew Pool Quay that ran to the north west of the store once had a timber pool where the timber was ‘seasoned’.

**Significance:** Local: “The only surviving complete structure of Harvey’s extensive complex on the wharves.”

**Baseline Condition:** Good

**Proposals:** The building is not part of the present scheme

**References:** 2, 19, 20, 16a
Structure: Carnsew Pool

Location: Carnsew Quay

Grid Ref: SW 5525 3720

Statutory Protection: Within Conservation Area.

Our Ref: CQ2

PRN No: 139019

CAU Ref: 46

Other:

Structure Type: Water Area

Dates: 1834

Description: Enclosed pool of water filled and emptied by the tide – the action controlled by sluices. The outer walls are mainly constructed from irregular stone and slag, with completed quay walls at the north-eastern corner. The quay area has been partially filled in with earth and rubble – this appears to have been part of former potential development where there was an attempt to gain more land for building.

The photograph right is looking south-west

<td>Carnsew pool is top left</td>
</tr>
<tr>
<td>Historic photo 18</td>
<td>Ariel View looking north-east</td>
<td>Carnsew bottom left</td>
</tr>
</tbody>
</table>

History: Constructed in 1834 for the Harvey Company to serve as a reserve of water to flush the channel of South Quay to help clear it of silt and sand. The area was also used for docking at the Carnsew Pool Quay – these were accessed via the lock gates at the north east corner of the Pool.

Significance: International/National: crucial part of the historic fabric.

Baseline Condition: Good

Proposals: To retain the contained water and create a channel to the Carnsew Quay area.

Necessity of change: As an important feature of the harbour the repair is necessary.

Gain/Loss: This is a very positive move and will enhance the historic features of the area and contribute positively the Conservation area.

Justification: The work makes a positive contribution.

References: 2, 9
Structure: Quayside Edge
Location: Carnsew Quay
Grid Ref: SW 5554 3723
Statutory Protection: Grade II and within Conservation Area.
Our Ref: CQ3 PRN No: 139021
CAU Ref: 48

Structure Type: Dock installation

Dates: late 18th early 19th century

Description: Quay edge of Carnsew Pool of granite coping stones now partially covered by earth and rubble and the water edge is now over 3 metres from the remains of the quay. Some of these coping stones are missing, probably stolen by local gardeners. This quay is quite an extensive structure and a local historian (Rob Lello) suggests that it is of fine dressed granite.

Photographs

<tr>
<td>DSCN 2351</td>
<td>Ditto looking NE</td>
<td></td>
</tr>
</tbody>
</table>

History: The Quays were originally built in late 18th century and appear to have continued in use after the construction of Carnsew Pool in 1834 – hence the need for the lockgates.

Significance: Regional: a very early feature of the harbour and an early contact with the Harvey Company.

Baseline Condition: Much of the features condition is unknown, apart from hearsay evidence as it is mostly buried. The coping stones which are above ground are in very good condition but some are missing presumed stolen.

Proposals: To leave as found

Necessity of change: There is to be no change to this feature.

Gain/Loss: The effect on the feature is neutral but the listed structure will be retained.

Justification: No justification needed.

**Structure Type:** feature

**Dates:** early 20th century

**Description:** Length of cast iron pipe internal diameter of 0.53 metres and 3 metres long, lying on the ground between the Carnsew Pool and the path.

**Photographs**

<table>
<thead>
<tr>
<th>Photo No</th>
<th>Object and orientation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSCN 2430</td>
<td>Pipe section looking NE</td>
<td></td>
</tr>
</tbody>
</table>

**History:** This is one of the mine risers that were cast at the Harvey foundry – by the state of the boltholes it has been used. Sections of these pipes were bolted together and set into mines attached to pumps and used to drain water from the mine workings. A number of these pipes have been used round the harbour as mooring post and this one might have been used for this purpose, been dug up and discarded.

**Significance:** Local: the pipe may well be a feature that could be used in future interpretation of the site but is only probably only useful in that context. However there is a potential use as part of the interpretation of Harvey’s foundry generally.

**Baseline Condition:** Fair/good

**Proposals:** Will be left on site to be considered as interpretation material for the next phase of the scheme.

**Necessity of change:** No change at this point.

**Gain/Loss:** At this point it is a positive move to retain the feature for possible use.

**Justification:** Retention of an historic artefact.

</tr>
</tbody>
</table>

History: The Pool entrance acts as a lock containing the gates that kept the water within the Pool which was then used to scour the channel. The gates could be open to allow shipping into the Pool.

Significance: Regional: crucial part of the development of the dock system especially associated with the Harvey Company.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Good

Proposals: To undertake any necessary repairs, to install a barrier and modern controlled sluicing system and to create a channel to the main body of water in the Pool.

Necessity of change: The installation of an efficient modern sluicing system is part of the process of bringing the harbour back into effective use. The major part of the structure will survive and be enhanced; the old gates are in a very bad condition and beyond repair and conversion to modern requirements.

Gain/Loss: The loss will be the view of the historic structure. The gain is the uncovering of that which is buried and the long term survival of the feature.

Justification: There is a need to improve the overall sluicing system and the alterations and repairs to this structure are part of that improvement which will be of benefit to the whole proposed development.

</tbody>
</table>

History: They were designed to open to let the tide into the Carnsew Pool and then shut to retain the water in the Pool. The sluicing was done via sluice panels in the gate. The associated training wall is now part of the South Quay but once extended into the Carnsew Channel. The gates were also used as lock gates to allow shipping into Carnsew Pool, see association with CQ 3.

Significance: Regional: crucial part of the development of the dock system especially associated with the Harvey Company.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application and the changes are dealt with under the report that covers CQ5.1 and SQ4.

Baseline Condition: One gate is in an extremely poor condition and is unlikely to withstand any attempt at moving it the other is also in a very poor condition but might be repairable to a state where it could be used as interpretation material.

Proposals: One of the gates will be scrapped and an attempt will be made to repair the other after an evaluation, to use as possible interpretation.

Necessity of change: There is a need to replace the present gates, as they are in too bad a condition to be used, with a modern structure that can be use to sluice the area.

Gain/Loss: The retention of the one gate, if possible as interpretation, is a positive move, the replacement with a modern sluicing system is also positive. It is of overall benefit to the future condition of the harbour but will restore the area to one of its historic purposes.

Justification: The need to restore the sluicing system is of major benefit to the overall scheme, the loss of the gates is largely determined by their very poor condition, the attempt to save the least damaged one is mitigation against this loss.

<td></td>
</tr>
</tbody>
</table>

**History:** The quay was part of the 1758 construction associated with the work of George Blewett the builder of St Michael’s Mount Harbour. The Harvey Company extended the Quay in 1834.

**Significance:** International/National: crucial part of the early history of the harbour complex and also the Harvey connection.

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application.

**Baseline Condition:** Mixed - parts of the wall are in good condition, parts fair but with areas of collapse.  
**Proposals:** To repair where necessary and rebuild the collapsed areas.  
**Necessity of change:** The walls of the harbour of necessity require repair.  
**Gain/Loss:** This is a positive move as the repair involves the restoration of original fabric of the harbour.  
**Justification:** This is a very positive move as it involves the restoration of the historic fabric of the Harbour.

**References:** 2, 9, (Brian Sullivan)
Structure: Mooring/warping post
Location: Carnsew Quay
Grid Ref: SW 5564 3737
Statutory Protection: Curtilage of Listed structure and within Conservation Area

Structure Type: Dock furniture

Dates: probably 1837

Description: Granite post stands over a metre high – may have lost part of the top.

Photographs

<table>
<thead>
<tr>
<th>Photo No</th>
<th>Object and orientation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSCN 2433</td>
<td>Granite post looking SSE</td>
<td></td>
</tr>
</tbody>
</table>

History: The position of the post suggests that it is part of the 1837 Harvey’s work on the Quay. It would be difficult to manoeuvre a ship out of the Carnsew Pool and the position of the post and its size suggests it was a warping post rather than just a mooring post.

Significance: Regional: an important part of the early working of the docks – further investigation might make it potentially an important part of the interpretation of the working of the docks.

Note: This is a listed structure and is also subject to a separate listed building application as part of the listed harbour wall and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Old damage, the remains are in a fair condition.
Proposals: To clear the area around the post to repair the surface and to retain the post.
Necessity of change: Part of the general repair and restoration.
Gain/Loss: This is a positive move as the repair involves the restoration of original fabric of the harbour.
Justification: A positive move with the retention of an historic structure.

References: 22.
Structure: Loading slot?

Location: Carnsew Quay

Grid Ref: SW 5564 3738

Statutory Protection: Grade II, within Conservation Area.

Our Ref: CQ8

CAU Ref: none

PRN No: none

Other:

Structure Type: Dock furniture

Dates: C1837

Description: Gap in the quay wall with a slope leading down to the sea wall, a drop of about 1.5 metres. The slope is surfaced with stone setts.

Photographs

<table>
<thead>
<tr>
<th>Photo No</th>
<th>Object and orientation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSCN 0222</td>
<td>Quay slot looking NNE</td>

<tr>
<td>DSCN 2434</td>
<td>Slot looking NE</td>
<td></td>
</tr>
<tr>
<td>DSCN 2435</td>
<td>Ditto looking NNE</td>
<td></td>
</tr>
</tbody>
</table>

History: The purpose of the slot and slope are yet unknown; its position suggests that it was not associated with cargo handling as it is unlikely spot to moor a ship. It is cart width and suggests that it was for taking sand thrown onto that side by the working of the training wall on the opposite side. (Rob Lello) suggests that it was for loading and unloading ships and was a means by which a barrow plank could be adjusted according to the tide – this is described in the field notes attached. Lello suggested that this type of loading slot was common but there little visual evidence for this although there appear to be a number on the north side of South Quay – further investigation of the quays would help to establish the number there might have been on the harbour.

Significance: Regional: it is an important part of the story of this part of the harbour history, development and working.

Note: This is a listed structure and is also subject to a separate listed building application as part of the listed harbour wall and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Good.

Proposals: To leave in situ.

Necessity of change: There is to be no change.

Gain/Loss: The retention of this feature makes a positive contribution to the area.

Justification: Justification not necessary.

References: 22, (Rob Lello)
Structure: Saw Mill (site of)

Location: Carnsew Quay

Grid Ref: SW 5564 3726

Photographs

<table>
<thead>
<tr>
<th>Photo No</th>
<th>Object and orientation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

History: Sawmill indicated on 1842 Tithe map (CAU 2000)

Significance: Low local

Baseline Condition: Unknown

Proposals: To uncover and record what, if anything, is left of the footprint and resurface the area.

Necessity of change: The surface of the quay at this point is in very bad condition and a new surface is required.

Gain/Loss: There will be a loss of the hidden archaeology, which is considered as probably of little significance apart from the record. The scheme will enable the site to be recorded and the new surface will enhance the area. (There is a general note on hidden archaeology in the general the PPG 15 Justification that accompanies the Outline Planning Application.)

Justification: The feature is of low priority and the refurbishment will benefit the area generally as an essential part of the scheme.

**CAU Ref:** 55

**Dates:** c1888

**Description:** Sluices were created to wash the channel of the harbour to keep it clear of silt and sand. This sluice was added to improve the effect of the sluicing. On the Carnsew Pool side two tunnels take the water to the sluices on the South Quay side of the quay. On the South Quayside there is a projecting structure faced with granite ashlar with four openings to the harbour channel. There does not appear to have an associated training wall. On the Carnsew Pool side of the sluice a weir was added at the time of the installation of the pipe line to the North Quay [1940] to help keep water back for water extraction (see CQ15). There are the remains of concrete control house on the top of the structure.

</tbody>
</table>

**History:** The Carasew Pool was opened officially on 27th December 1834 with a ceremonial breakfast at the White Hart Hotel. The first sluice was opened at that time but proved inadequate to the increased traffic and the ship building activities in keeping the channel open and a second sluice was opened probably when the shipbuilding activity was expanded in 1888. This second sluice is the one that works today although the mechanism was altered recently.

**Significance:** International/National: a crucial part of the early development of the harbour.

**Baseline Condition:** Fair

**Proposals:** To repair the sluice and restore it to its original function as part of the scouring system of the estuary. This involves replacing the present mechanism with efficient modern sluice gates within the historic structure. The major change to the outward appearance of the structure is the need to have a control mechanism mounted on the top of the old sluicing structure.

**Necessity of change:** To bring the feature up to the necessary standard to perform its function

**Gain/Loss:** Very positive as it will restore an historic part of the harbour. The new structure as a well designed feature should be seen as part of the natural progress of the harbour. A move that the Harvey Company, who built the feature originally would have pursued as a necessary improvement of the harbour

**Justification:** A positive part of the modernisation of the harbour facilities.

**References:** 2, 9, 19, 20
**Structure**: Granite Bollard/Warping Post

**Location**: Carnsew Quay

**Grid Ref**: SW 5559 3748

**Statutory Protection**: Curtilage of Listed sluice and within Conservation Area.

**Our Ref**: CQ11  
**PRN No**: none

**CAU Ref**: none  
**Other**: none

**Structure Type**: Dock feature

**Dates**: c1834

**Description**: Granite Bollard standing about a metre high set at the corner of the sluice projection. From its position and size the post was more likely to be used for warping boats rather than for mooring. (see especially DSCN 2182)

History: The bank first started during the work to create the Carnsew Quay in mid 18th century and extended in the work of 1837 to create the Carnsew Pool and to make the scouring of the harbour more efficient.

Significance: Low local: part of the early establishment of the harbour complex.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Poor.

Proposals: To retain as found.

Necessity of change: No change.

Gain/Loss: Neutral.

Justification: No justification necessary.

</tbody>
</table>

History: During the 2nd World War the area was used to build or possibly to moor barges for the Normandy landings of 1944. 20 slipways or pens were on the Carnsew Quay opposite the Cockle Bank and there were a further 12 on the tidal pool of the Hayle River. (There is some discrepancy in the numbers between the oral history and what appears to be evidence of an ariel photograph.)

Significance: Low local: there appears to be no remains.

Baseline Condition: Not known.

Proposals: To investigate any possible remains during the refurbishment of the area and to assess positively the future of any features found.

Necessity of change: No change is contemplated at this juncture

Gain/Loss: The impact is negative at this point; any remains if they still exist will be recorded.

Justification: The proposals will help to complete the record of the harbour.

</table>

**History:** To facilitate the use of the Carnsew Pool as a swimming area a ‘lido type’ structure was created with spaces to sit (the concrete steps) changing rooms and it is said a small cafe. The siting of this between the two sluices would appear to be strange in a time of modern health and safety. However it is situated with a spit of land between the swimming area and the sluice tunnel.

**Significance:** Local: minor reminder of the social life of the town.

**Baseline Condition:** Poor.

**Proposals:** To be left as found.

**Necessity of change:** There will be no change.

**Gain/Loss:** Neutral.

**Justification:** There is no justification necessary.

<td>Plug with sea wall looking SW</td>
<td></td>
</tr>
</tbody>
</table>

**History**: The cooling water for the Power Station originally came from and was discharged off the Lelant Quays which was sometimes not very efficient at very low tides. However when the Bromide works was planned it was found that the bromide content in the seawater was higher in the Pool than elsewhere. A joint venture was mounted to get water from the Pool for both the works and a pipeline was installed for that purpose. The weir at the entrance of the sluice at this point was put in to help with the depth of water in the Pool. When the inlet was in use it was surmounted with a tripod and a fence surround.

**Significance**: Local.

**Baseline Condition**: Fair.

**Proposals**: To be left as found.

**Necessity of change**: There will be no change.

**Gain/Loss**: Neutral.

**Justification**: There is no justification necessary.

</tr>
</tbody>
</table>

History: The wall is part of the curtilage wall to the Harvey’s yard but has been reduced in height at an unknown date.

Significance: Low local: there is little of it left to make the remains more significant.

Baseline Condition: poor.

Proposals: Demolish – the gate posts to be retained as a point of interpretation.

Necessity of change: To provide a safe access to Foundry site from the South Quay.

Gain/Loss: There will be the loss of this wall.

Justification: The wall is regarded as of low local value and its loss is balanced against the overall benefits of the scheme.

References: 22
Structure: Area of yard

<tr>
<th>Photo No</th>
<th>Object and orientation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>DCSN 3612</td>
<td>Surface and paving looking</td>
<td></td>
</tr>
</tbody>
</table>

History: The area “may be associated with the former wharves tramway on the quay” (CAU 2000)

Significance: Low local: it is part of the evidence of the Harvey’s activity in the area but is not likely to be of major importance.

Baseline Condition: Unknown as much of it is covered by present surface.

Proposals: To investigate, record and to remove as part of the refurbishment of the area.

Necessity of change: The current surface is in poor condition and resurfacing will require to excavation to a depth beyond the depth of the original surface.

Gain/Loss: This feature will be lost but any finds will be recorded. The physical remains of any track will be lost but there will be the recording of the feature adding to the stock of knowledge of the rail system. (See note on hidden archaeology in PPG 15 Justification document that accompanies the Outline Planning Application.)

Justification: The loss of this relatively low priority feature is balanced against the general improvement of the area and it is believe it should be sacrificed for the greater good that the scheme will bring.

**Structure Type:** Building  

**Dates: **Early/mid 19th century  

**Description:** Attached to Blue Hayes (SQ7) Two walls are still standing forming the ‘garden’ of the adjoining house. The walls are of irregular (rubble) stone blocks with red brick window openings; there is a curved part to the wall at the southeast corner.  

**Photographs**

**History:** It is identified as the Drawing Office for the Harvey’s Ship Yard according to a dated plan at the Cornwall Records Office. It appeared to be on of two buildings with a curved face to the south forming an entrance to the shipyard proper.  

**Significance:** Local: it is important as, apart from the Jewson Building [CQ1] it is the only other standing remains of the formerly very extensive series of shipyard and other buildings on the quay. (CAU 2000)  

**Baseline Condition:** Very poor.  

**Proposals:** Demolish  

**Necessity of change:** The building is on a site crucial to the development of the area both strategically and economically.  

**Gain/Loss:** Loss of building.  

**Justification:** The wall is regarded as of low local value and its loss is balanced against the overall benefits of the scheme.  

**References:** 2, 9, 16, 16a  

**Note:** Permission was given to demolish the structure subject to a pre-demolition survey taking place.

</table>

**History:** The structure now buried was part of the improvements made during 1834—this area is most closely associated with the shipbuilding activities started at that time.

**Significance:** International/National: an extremely important part of the harbour complex.

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application.

**Baseline Condition:** The nature and condition of the buried wall is unknown at this time.

**Proposals:** Excavate back to the 1834 line, evaluated and to determine the exact nature of repairs and or rebuilding necessary.

**Necessity of change:** To improve the condition of the area and restore the historic plan.

**Gain/Loss:** The historic line will be restored.

**Justification:** Restoration of a listed structure.

**History:** The training wall was part of the improvements installed by the Harvey Company when they built the South Quay in the early part of the 19th century. The wall directed the water from the sluice at Carnsew Pool to scour the channel. The low wall beyond the training wall was probably added in 1890.

**Significance:** International/National: an extremely important part of the harbour complex.

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application in association with the listed harbour walls.

**Baseline Condition:** Good.

**Proposals:** Retain and repair as necessary.

**Necessity of change:** Improvement of a listed structure.

**Gain/Loss:** A positive gain.

**Justification:** An improvement of a listed structure.

**References:** 2, 17, 19

---

1 The need to improve the sluicing was as a direct result of the refusal of the Copperhouse Company to do so regularly unless Harvey’s paid a premium which the Harvey Company were unwilling to do.

**History:** The Quay was largely rebuilt in 1834 partly to accommodate the shipbuilding that was started at that time and to improve the sluicing of the channel. The quay walls were lined with a timber structure to protect the quay during the period of fitting out and possibly during ship launching – the latter being more likely. This structure is probably part of this protection work. (There was similar protection at North Quay.)  

**Significance:** Regional: this could be a vital piece of evidence of the shipbuilding activity of the Harvey Company.  

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application in association with the listed harbour walls.  

**Baseline Condition:** Poor.  

**Proposals:** Retain and repair as necessary.  

**Necessity of change:** Improvement of a listed structure.  

**Gain/Loss:** A positive gain.  

**Justification:** An improvement of a listed structure.  

**References:** 22
Structure: Quay Walls
Location: South Quay
Grid Ref: SW 5563 3756
Statutory Protection: Grade II and within Conservation Area.
Our Ref: SQ6
CAU Ref: 50
PRN No: 139023
Other:

Structure Type: Dock Installation

Dates: c1819

Description: The quay walls beyond (to the northwest) the point where the walls have been damaged and the filling in of the Pool has begun they form three sides of the ‘peninsular wharf. The construction is of irregular shaped granite blocks – some of the granite coping stones are tied together with iron ties. The plan is scolloped, especially on the Penpol side to ensure more boats could tie up – it allowed the bowsprits of the sailing ships to overlap. There are steps on the extreme north end and slots in the Quay wall to take loading shoots. (There is a fuller description of the east side at SQ17.)

</table>

History: The majority of the structure was built between 1805 and 1819 but there was extensive refurbishment, associated with the shipbuilding industry in 1834.

Significance: International/National: a crucial part of the harbour installation.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Fair to very poor.

Proposals: To repair and retain.

Necessity of change: The harbour wall is in need of repair to leave in its present condition is to invite collapse as has happened to parts of the east side of the quay.

Gain/Loss: Very positive, the repair of the wall will ensure that this crucial part of the original structure survives.

Justification: Essential repairs are necessary to ensure the survival of the feature.

References: 2, 17, 19
**Structure:** House (Blue Hayes)  
**Location:** South Quay

**History:** The building was the Transport office for the Harvey Lorries using the site (pers. comm. Rob Lello). It is now occupied as a house.  

**Significance:** Low local: it is a late addition to the site and adds little in terms of understanding.  

**Baseline Condition:** Very poor.  

**Proposals:** Demolish.  

**Necessity of change:** The building is on a site crucial to the development of the area both strategically and economically.  

**Gain/Loss:** Loss of building.  

**Justification:** The wall is regarded as of low local value and its loss is balanced against the overall benefits of the scheme.

**References:** 2, 22, (Rob Lello)

**Note:** Permission has been granted to demolish the building, subject to a pre-demolition survey taking place.
| **Structure: Ship Yard (site of)** |
| **Location:** South Quay |
| **Grid Ref:** SW 557 373 |
| **Statutory Protection:** Within Conservation Area. |
| **Our Ref:** SQ8 –15 | **PRN No:** 40360 |
| **CAU Ref:** 98 |

**Note:** There are a number of concrete foundations on the south end of the Quay, according to Rob Lello these are modern foundations of buildings put up after the ship breaking business closed at the Quay, probably built in the late 1950s. The modern foundations are said to be on the footplate of the original buildings on the site.

**Structure Type:** Archaeology Site

**Dates:** 1805, 1334 – 1863 later used as ship breaking.

**Description:** This is a large site at the south west end of the South Quay, now almost entirely derelict land – there is rubble and waste heaped at the south west side and there are signs of buildings. These are probably later buildings using the footplate of older buildings. The slipways and part of the South Quay Pool have been filled in and there is little sign of the industrial activity that once took place on the site. The buildings and their purpose and position can be determined with the use of Edward Vale’s book ‘Harveys of Hayle’, and plans held at the County Records Office at Truro and the OS series of 1:2500 maps. A plan of these buildings is included in the historical overview. None of these sites have any Statutory Protection except the buried quay wall – but the description of this is a little vague.

The Cornwall Archaeology Unit has catalogued the following:

| **Structure: Cart House (site of)** |
| **Location:** South Quay |
| **Grid Ref:** SW 5576 3733 |
| **Our Ref:** SQ8 | **PRN No:** 139313 |
| **CAU Ref:** 337 |

#### History:
The South Quay was established in the late 18th century and shipbuilding began in 1834 and continued until 1903. The dock was extensively altered and enlarged in 1834; 2 slipways were added to the original and the extensive works grew up around the slipways. Alterations occurred once the shipbuilding ceased, although ship activity continued with the breaking up of ships in the 20th century.

#### Significance:
- **Low Local:** a crucial part of the harbour complex – very high as a record of the activity but the physical remains are probably low.

#### Baseline Condition:
The condition of the hidden archaeology is unknown.

#### Proposals:
This area of the quay will be excavated to a depth of more than a metre for new buildings and re-surfacing which will probably destroy any remains – if they are found. Any remains will be recorded.

#### Necessity of change:
The poor condition of the area and the need for improvement.

#### Gain/Loss:
The physical remains of any foundations will be lost but there will be the recording of the feature adding to the stock of knowledge of the historic working on the South Quay.

#### Justification:
The loss of this medium priority feature is balanced against the general improvement of the area and it is believe it should be sacrificed for the greater good that the scheme will bring. The work will enable a recording of the feature which will lead to an important gap in our knowledge of the Harvey Company’s industrial activity. (See note on hidden archaeology in the PPG 15 Justification that accompanies the Outline Planning Application.)

**Structure:** Tunnel (site of)

**Location:** South Quay

**Grid Ref:** SW 5563 3758

**Statutory Protection:** Curtailage listed structure and within Conservation Area.

**Our Ref:** SQ16

**PRN No:** 140970

**CAU Ref:** 663

**Other:**

**Structure Type:** site

**Dates:** c1818

**Description:** The external evidence is scant the possible north end is covered by an area of metal piling, the south end by an area of apparent in-filled masonry. The metal piling on the east side is possibly there because of the danger of collapse of the quay wall because of the tunnel. There is a portion of an 1828 map in the PPG 15 Statement that accompanies the Outline Planning Application which shows the position of the tunnel.

</table>

**History:** “This is the site of the road tunnel under South Quay, through which ran the ancient road across the sands to Lelant Quay, the preservation of which was the causa belli of the pitched battles between the men of the CCCo and Harvey’s in 1818/19, which became known as the Battle of the sands). However the underlying of the battle was the rivalry between the two companies, in this particular case was the building of the East and South Quays which was contemporaneous. The line of this ancient track ran to the west of the Royal Standard Inn (formally the Passage Inn) under the South Quay and a line which is still observable up to the Lelant Church.

**Significance:** Local: the feature is of historic note but little can be seen of the evidence apart from the infilled masonry on the west side of the quay.

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application in association with the listed harbour walls.

**Baseline Condition:** Very poor.

**Proposals:** To repair the harbour wall and retain any evidence of the tunnel entrance.

**Necessity of change:** The general repair of the harbour wall is essential for its long term survival.

**Gain/Loss:** The repair is a positive gain, finding any of the feature will add to our knowledge of the history of Hayle, retention of any signs of this feature will increase the positive nature of the proposals.

**Justification:** The positive nature of the proposals.

**References:** 2, 5, 6, 9

**Note:** Investigation is to take place to determine the exact nature of any hidden remains

---

3 The nature of the masonry of the quay walls at this point may be the result of this battle – there is a note on this in the attached field notes.
Structure: Quay Wall (east side)
Location: South Quay
Grid Ref: SW 5575 3740
Statutory Protection: Listed Grade II and within Conservation Area.
Our Ref: SQ17
CAU Ref: 50
PRN No: 139023

Note: We have divided the Quay wall into three parts whereas the Archaeology Unit only use two – this east side of the quay therefore shares the some of the same references with the quay edge at the north end of the west side.

Structure Type: Dock Installation

Dates: 1834

Description: The Quay wall runs north and south for 440 metres and turns at the extreme north end running west for 25 metres. The construction is largely of irregular blocks of granite with series of cargo slots (separate entry). The wall has collapsed just over 200 metres from the southern end, and there is some replacement metal piling just beyond the collapse – it is because of the poor state of the wall partly due to the possible internal collapse of the tunnel (SQ16). There is a set of stone steps down to the water at the extreme north west corner.

</table>
History: The quay was established in the late 18th century but the majority of the Quay wall and the cargo slots date from the rebuilding of the Quay in 1834. The Quay has suffered damage due to the failure of the wall; the 20th piling is a sign that there was a perceived danger that more was in danger of doing the same thing. The piling is in the area of where the tunnel passed under the quay (SQ16) which maybe the source of the weakness. The South Quay at Penpol became one of the major docks for the tall ships and is scollopred in design (not in a straight line) so that the bowsprits of the ships could overlap and thus more ships could be moored.

Significance: International/National: a crucial part of the Harbour.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Fair to very poor.

Proposals: To repair, remove some bad repairs and to rebuild the collapsed areas.

Necessity of change: Repairs and rebuilding are required to ensure the long-term survival of this essential feature of the harbour.

Gain/Loss: A positive move.

Justification: The positive nature of the proposals.

**History:** The Penpol Creek was made into a canal/pool to serve the Harvey foundry at Foundry Square. The east side was a beach/mud dock facility. The pool as we known it was created with the building of the south Quay in 1813 – 14. The facilities were improved with the refurbishment of South Quay in 1834. The South Quay at Penpol became one of the major docks for the tall ships and is designed with scallops (not in a straight line) so that the bowsprits of the ships could overlap.

**Significance:** International/National: a crucial harbour feature.

**Baseline Condition:** Good.

**Proposals:** The construction of the Half-tide barrier will alter the pool as it will filled with water. The major impact will be on the Conservation Area and this is the subject to comment in the PPG 15 Statement that accompanies the Outline Planning Application.

**Necessity:** Part of the improvement of the area in the proposed development.

**Gain/Loss:** There will be no loss of any of this feature.

**Justification:** The benefit to the overall scheme.

</table>

History: When the South Quay was created in the early 19th century there was a need to control the water of the Penpol Creek. The northern of the sluices is close to what was the original line of the Penpol Creek – this ancient course was the subject of a court battle between the Harvey Company and CCCo. There are two marker stones, close to the White Hart Hotel possibly the ones referred to on David Pulmer’s map of 1810.

Significance: Local: these features are highly unlikely to disappear – especially the active sluice.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application in association with the listed harbour walls.

Baseline Condition: Southern Good, northern one fair.

Proposals: To be left as found.

Necessity of change: There will be no change.

Gain/Loss: Neutral.

Justification: There is no justification necessary.

References: 2, 11, 19, 20, Rob Lello, Brian Sullivan.
**Structure: Railway (site of?)**

**Location:** Penpol Terrace

**Grid Ref:** SW 5583 3740

**Statutory Protection:** Within Conservation Area

**Our Ref:** PC4  
**PRN No:** 31832

**Structure Type:** Railway

**Dates:** 1837 – 1963

**Description:** Railway track, running along Penpol Terrace between the roadway and the quay edge – possible remains under the landscaped area.

</tbody>
</table>

**History:** The Original line of the Hayle Railway ran along what is the King George V Memorial Walk, across Copperhouse Creek (see SB1 and NQ3) the line then following the line of Penpol Creek to the Terminus at Foundry Square. This line was superseded in 1852 with the opening of the West Cornwall Line and the track became part of the Wharves Railway. During its life from 1852 to closure in 1963 the shunting was down by horse.

**Significance:** Local: it is unknown whether the railway track still exists under the landscaped area; the site is only a potential archaeology site.

**Baseline Condition:** Unknown.

**Proposals:** To be left as found as this is not part of the proposed development.

**Necessity of change:** There will be no change.

**Gain/Loss:** Neutral.

**Justification:** There is no justification necessary.

**History:** Site of the Bristolmen’s Dock incorporated into the East Quay Dock in 1818 but still shown on the 1848 Phillack Tithe Map.

**Significance:** Negligible.

**Baseline Condition:** Unknown.

**Proposals:** The site will be altered as any dredging work is carried out in the area.

**Necessity:** Not applicable.

**Gain/Loss:** There will be no loss as the site has constantly changed with the effect of the tide and the scouring of the harbour.

**Justification:** The Old Bristolmen’s Dock is only a reference to an historic usage not to a structure the site was constantly changed by the tide and later the scouring of the harbour and therefore any changes made by these proposals are merely part of an on-going process.

Structure: Quay Walls

Location: East Quay

Grid Ref: SW 5570 3765

Statutory Protection: Grade II and within Conservation Area

| Our Ref: | EQ2 |
| PRN No: | 31900 |
| CAU Ref: | 127 |

Structure Type: Dock Installation

Dates: 1818-19

Description: The Wall forms three sides of the ‘peninsular style’ quay. South side rubble laid stone blocks topped with dressed granite copings. The north wall is laid in three distinct styles, the first section at the east end granite ashlar, then a section in rubble, a collapsed area, a wall of scoria and then a repeat of the other end. The significant collapse of the quay wall is said to be the result of the recent irregular opening of the sluices. There are steps to the water at the furthest point (northwest) of the Quay. The Quay has a sharp turn to the east-northeast at the Penpol end (southwest) and the quay was probably terminated at this point to keep the access to the right of way across the sands free.

History: The Quay was built by the Copperhouse Company (CCCo) in direct competition to the development of the South Quay by Harvey’s – this led to a confrontation and ultimately a Court Case. The case was technically about where the Penpol Creek originally flowed – the case was found in favour of Harvey’s and as a result the Court forced CCCo to share East Quay with Harvey’s. The real argument was about the viability of the Penpol Pool, which CCCo wanted to see closed.

Significance: International/National: a crucial to the harbour structure.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Good to very poor.

Proposals: To repair and retain.

Necessity: The harbour walls required to ensure that the essential harbour structure survives into the future.

Gain/Loss: Very positive gain in terms of the historic structure of the harbour.

Justification: A very positive element of the scheme.

</tbody>
</table>

History: Ore Hutches indicated on the 1877 OS map.

Significance: Negligible.

Baseline Condition: Unknown.

Proposals: Building and resurfacing of the quay will erase any signs of these structures, if they still exist.

Necessity: Excavations in the area will be more than a metre deep which will destroy any hidden archaeology.

Gain/Loss: The loss is negligible as it is unlikely that anything of what was a slight structure will have survived. The gain is the benefit that the scheme brings to the area.

Justification: The loss is outweighed by the general improvement in the area. (See note on hidden archaeology in the PPG 15 Justification that accompanies the Outline Planning Application.

**History:** The Hayle Railway was laid close to the quay, the railway subsequently became part of the Hayle Wharves Railway and there were extensions to the wharves these are part of the remains of that railway.

**Significance:** Local: there appears to be little remaining of the railway complex outside of the North Quay but there appears to be small portion of it here.

**Baseline Condition:** Unknown.

**Proposals:** The building and resurfacing of the area will obliterate any remains of the rail tracks on the East Quay.

**Necessity:** Excavations in the area will be more than a metre deep which will destroy any hidden archaeology.

**Gain/Loss:** The loss of the track is off-set by the ability to record the rail system and the gain is the benefits that the scheme brings to the area.

**Justification:** The loss of the rail track is balanced against the record that can be made and the overall benefit that the scheme brings to the area.

**History:** Pump House belonging to South-West water Authority we believe associated with sewerage – it appears to be virtually empty but still contains an active control panel. (1/09/05)  
**Significance:** local.

**Not part of the Proposed Development.**

**References:** 22. Brian Sullivan
3.5. Merchant Curnow’s Quay

**Structure:** Wharf  
**Location:** Merchant Curnow’s Quay  
**Grid Ref:** SW 5590 3763  
**Statutory Protection:** Grade II and within Conservation Area  
**Our Ref:** MCQ1  
**CAU Ref:** 130

**Note:** This entry refers to the site of the early development on the ground to the point where the Copperhouse Company’s development in the 1770s began. (Roughly where the use of scoria blocks begins.) The rest of the site, which was surveyed by the Archaeology Unit, is registered under the Copperhouse Company site.

**Structure Type:** Dock Installation  
**Dates:** mid 18th century

**Description:** Quay to the west of Swing Bridge of granite blocks extended with scoria Blocks. There are several mooring posts on the quay. A recent need to repair a gas main (18/07/07) close to the swing bridge indicated that the surface was non-mortared inter-locking stone over a stone underlay and then earth.

**History:** The Quay was developed by Merchant Curnow and his business associates from about 1740 onwards. They were also involved in the development of the quay on the opposite side of what was then Angarrack Creek (later Copperhouse Creek) which became known as the Riviere Quay, later developed by the CCCo and absorbed into the North Quay. The Quay was acquired by the Copperhouse Company in 1770s and extended along the edge of the Copperhouse Creek in Scoria blocks. The subsequent history of the quay belongs to the Copperhouse Company and the development of the Copperhouse Canal.

**Significance:** International/National: Probably the oldest part of the development of Hayle as a major industrial port.

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application. The impact of the proposed bridge is subject to comment in the section on the Conservation Area in the PPG 15 Statement that accompanies the Outline Planning Application.

**Baseline Condition:** The walls of the quay are in a fair condition but the surface condition is unknown as it is covered mainly by grass. (Recent excavation on site [September 2007] because of a gas leak suggest that the surface may be a mixture of granite slabs and setts over a rubble core.)

**Proposals:** The scheme is to repair and retain all the remains of the quay. The proposed bridge that will span the Copperhouse Pool between Hayle Terrace and North Quay will not touch the quay as the anchor point lies to the road side of the historic structure.
Necessity: There is a need to build another bridge across the Pool as the main access to the development on North Quay and beyond. The present access over the old railway bridge is inadequate for modern vehicular requirements and increased use of the bridge would put a strain on traffic flow as the turning onto the bridge is very tight.

Gain/Loss: The uninterrupted view of the quay will be cut but the engineering solution does not touch the structure. The gain is that there is no need to radically alter or replace the listed rail swing bridge.

Justification: Although the listed structure is not touched and repairs will improve its survival chances for some time to come the view of the quay will be 'spoilt’. This is set against the general improvement in the area and the survival and integrity of the listed swing bridge.

References: 2, 5, 6
Structure: Hayle Railway
Location: Merchant Curnow’s Quay
Grid Ref: SW 5581 3762
Statutory Protection: Listed Grade II and within Conservation Area
Our Ref: MCQ2 PRN No: 31832
CAU Ref: 95 Other:

Note: The Cornwall Archaeology Unit’s references apply to the whole of the railway complex – this is dealt with in a section on the historical overview and there are references to wharf railway under North Quay (NQ3, 5, & 16). This entry is a reference to a particular point on the railway where it leaves the Swing Bridge at south end.

Structure Type: Railway

Dates: 1837 & 1852

Description: The line of the railway, having crossed the Swing Bridge split into two tracks. One arm swung right and ran along the shore line of Penpol Terrace to Foundry Square and the South Quay. The other arm crossed the road to run up the slope to join the main line at Hayle Station. The line of this latter 1852 railway can still be seen, a footpath follows it to the point where it met the new main line. The line of the Penpol arm appears to have disappeared completely although some of the track may be found during the refurbishment of the area.

<tbody>
<tr>
<td></td>
<td>See the section on the Swing Bridge</td>
<td></td>
</tr>
</tbody>
</table>

History: The first line of the railway entered the town on the northside of Copperhouse Creek, along what is now King George V Memorial Walk. This line crossed the creek by a drawbridge. The line was largely superseded in 1852 when the lines were linked to the West Cornwall Railway at Hayle Station. However the line that ran along the north side of the Copperhouse Pool was in use until the end of the 19th century.

Significance: Low local: the bridge is the most significant aspect of the railway remains in the area the line of the railway less so – if it has survived in this area.

Baseline Condition: Unknown as it constitutes hidden archaeology.

Proposal: Road improvements are likely to obliterate any remains found.

Necessity: Adequate access to the proposed development is crucial to the success of the whole scheme and the remains of the railway in this area would be a great hindrance to that successful development.

Gain/Loss: The remains of the track will be lost but exposure of the track will enable it to be recorded which will benefit the overall understanding of the rail system.

Justification: The loss will be off-set against the overall benefit the scheme will bring to the area. Interpretation of the rail system elsewhere will ensure that the ‘preservation in record’ will not be lost.

References: 2, 4, 6, 18, 19

Note: Investigation is to take place to determine the survival and exact nature of any rail track that might have survived.
3.6. Swing Bridge

| Structure: Swing Bridge                                      |
| Location: North Quay/Merchant Curnow’s Quay                  |
| Grid Ref: SW 5580 3763                                       |
| Statutory Protection: Grade II and within Conservation Area   |
| Our Ref: SB1.1. PRN No: 139161                                |
| CAU Ref: 128 Other:                                          |

**Note:** This entry should be seen with the entry below on the sluice and lock, which is an integral part of the whole structure. There are notes on a brief survey of the structure and adjoining features in an extract of field notes attached.

**Structure Type:** Railway/Road

**Dates:** 1877

**Description:** The cantilevered iron riveted swing bridge was once lifted and turned by a hydraulic engine, the engine has gone and the swinging of the bridge is no longer operational. The bridge is 26.6 metres long and 9 metres wide, divided into two equal sections – the west section took the railway and the east the road.

The parapets and the dividing wall are built in sections riveted together forming a segmental top to the bridge. The bridge is supported on granite abutments. The northern one is in rubble with granite dressed coping in which the rebate for the drawbridge can be clearly seen. The southern end was probably put in at the time of the replacement of the old drawbridge by the swing bridge. It is battered granite ashlar with a dressed curved edged coping, beyond which is the original abutment at the base of this is the opening to the sluice (see especially DSCN 2471). The gearing house for moving the bridge stands close by and still contains the gears and the chains that run to the centre of the bridge.

**History:** There has been a crossing of the what became the Copperhouse Creek from medieval times. A lock and bridge were constructed in 1780s by the Copperhouse Company following the construction of what then known as Reviere Quay, now part of North Quay. This was replaced by an iron swing bridge in
1837 to take the railway across the creek. This bridge was replaced in 1852 at the time of the connection with the West Cornwall Railway. This latter drawbridge was also replaced when in 1877 the present structure was put in place.

**Significance:** Regional: a crucial part of the harbour.

**Note:** This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application.

**Baseline Condition:** Fair to good.

**Proposals:** To be left as found.

**Necessity of change:** There will be no change.

**Gain/Loss:** Neutral.

**Justification:** There is no justification necessary.

**References:** 2, 4, 5, 19, 20, 21, 22

**Note:** The bridge is owned by the British Rail Residual Board. They appear not to not to favour selling their assets to private companies but seem to be willing to sell such redundant features to bodies such as the Cornwall County Council.

</tbody>
</table>

History: In 1788 the Cornish Copper Company built a lock gate, bridge and sluice at the point of the ancient crossing of the Copperhouse Creek. This enabled the company to retain tidal water in the Copperhouse Pool, which was deepened at this point with the creation of the Copperhouse Canal. The first action once the high tide had passed was to release the water via the sluice – this was under pressure because of the restricted nature of the sluice. This water pushed in the right direction by the training walls helped to free the channel of silt and sand. The ships wanting to leave the Pool followed. The Pool ceased to be used for shipping in the 19th century and the lock gates were replaced by the present control mechanism in the middle of the 20th century.

Significance: International/National.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application as part of the listed harbour walls

Baseline Condition: Fair to good.
Proposals: To be left as found.
Necessity of change: There will be no change.

</tbody>
</table>

History: The wall and sluice were built in the late 18th century to help keep the channel of Copperhouse Canal clear of silt and sand. The water would be kept back within the Copperhouse Pool once filled by the tide and released through the sluice thus creating a pressure of water and the desired de-silting effect.

Significance: International/National: an important historic feature of the harbour.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application as part of the listed harbour walls.

Baseline Condition: Fair to good.

Proposals: To retain, repair where necessary.

Necessity: Repairs that will take place will be sufficient to ensure the survival of this feature.

Gain/Loss: Positive gain to the scheme generally.

Justification: The enhancement of historic features of the harbour.

**Dates:** Possibly early 18th century but developed in 1780s

**Description:** The quay wall in front of the Harbour Managers Office (sometimes known as Custom House Quay). Cinder Bank and wall – might date from the early 18th century but was certainly part of the 1780s development. Today most of the wall has gone and is mainly cinder bank; the remains of the old wall lie to the south west close to the Swing Bridge. The old slipway is at the north end of this part of the Quay – the new and temporary slipway lies just to the south of the old.

</tr>
</tbody>
</table>

History: Before the creation of the quays and probably after some of them were created ships were either beached or tied up in the open water of the harbour and unloaded by lighter. The latter method would have required some form of mooring and the block is a probable way in which this was done.

Potential Hidden Archaeology: There may be more of these stones in the wall, with care these could be found and used as a feature. Investigation is likely to prove, at least the high probability, that these stones were used for that purpose.

Significance: Regional: if these stones were used for the purpose described then they are an essential part of the story of the harbour.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application as part of the listed harbour walls.

Baseline Condition: Good.
Proposals: To be left as found.
Necessity of change: There will be no change.
Gain/Loss: Neutral.
Justification: There is no justification necessary.

History: In 1862 Hayle was given a Custom House and the right to general bonding merchandise. Some of the rights that followed were withdrawn 17 years later. It today houses the Harbour Managers Office

Significance: Regional: part of the development of the harbour.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Very Good.

Proposals: Refurbish, to erect a raised road to the rear (north) and outline plans for two flanking buildings to east and west.

Necessity: To upgrade the facilities and retain as office. The wall of the yard will be lost but this appears to be a fairly modern feature.

Gain/Loss: A positive gain for the building.

Justification: The positive nature of the proposals which includes the retention and the ongoing use of the listed building.

</tbody>
</table>

History: The Copperhouse Company created a canal between their works and the Hayle Estuary along the line of the Angarrick Creek. In 1788 the lock entrance to the canal was shifted from Ventonleague to the narrow neck of the Copperhouse lagoon at the present site of the Swing Bridge – this enabled the whole of the lagoon to be kept in water and thus creating a wet dock. The old lock gates were replaced by the present sluice gate and it is said that the old gates were buried in the yard of the Customs House.

Significance: Local: a potential archaeological feature.

Baseline Condition: Unknown – they are part of the hidden archaeology of the area.

Proposals: Yet to be determined but may be come part of the interpretation of the area – will depend on the state of the gates.

Necessity: Not known at this point.

Gain/Loss: Unknown at this point.

Justification: Unknown at this point.

</table>

History: Part of the original set up of the railway in the 1830s, the stream was essential part of the second sluice system (NQ6) that entered the main estuary to the north west of the Custom House.

Significance: Regional.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement.

Baseline Condition: Partially unknown as the foundations of the bridge have not been surveyed

Proposals: To retain possibly with the exposure of more of the structure and to add some interpretative material; repair as necessary.

Necessity:

Gain/Loss: A positive step.

Justification: A positive part of the scheme.

</tr>
</tbody>
</table>

History: The sluice was built to increase the efficiency of the flushing mechanism of the Copperhouse Pool as this sluice acts directly on the channel of the North Quay. (Pascoe states that the sluice was built in 1807 when Carne took over management of the CCCo but it is more likely to be when CCCo acquired the freehold of what was then known as the Reviere Quay in 1811 (CAU 2000)
The Octel Plant (ICI) had an outlet here which was said to sterilise the water and damaged the fishing (see NQ 18)

Significance: International/National: an extremely important part of the harbour workings.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within in the PPG 15 Statement that accompanies the Outline Planning Application as part of the listed harbour walls

Baseline Condition: Good.
Proposals: To retain and repair where necessary.
Necessity: Any repairs will be sufficient to insure the survival of the feature.
Gain/Loss: Positive gain.
Justification: Enhancement of the feature.

References: 2, 6, 18, 19

The setting of the feature will be altered as the result of the need for a new access road to North Quay.
See entry NQ8.2, below.
Structure: Culvert on the line of stream
Location: North Quay

</tbody>
</table>

History: The Copperhouse Pool and an arm of the estuary were once joined at this point controlled by a sluice about 1811. This ‘stream’ was either filled in or partially culverted.

Significance: Unknown at this point.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application as part of the listed harbour walls

Baseline Condition: Unknown.

Proposals: Unknown at this point.

Necessity: Unknown at this point.

Gain/Loss: Unknown at this point.

Justification: Not known at this point.

References: 2, 6, 18, 19

Note: An investigation will take place to establish what lies on the line of the old waterway.
**Structure:** Quay

**Location:** North Quay

**Grid Ref:** SW 5524 3778

**Statutory Protection:** Within Conservation Area

**Our Ref:** NQ9  PRN No: 139169  CAU Ref: 142  Other:

**Structure Type:** Dock Installation

**Dates:** mid – late 18th century

**Description:** Quay from the Sluice at the Customs House running east. It is built in an irregular stone (rubble) form with a granite coping. There are granite posts and a set of granite steps from the waterline at a knuckle about half way along the length of the quay. The west end of the quay was a protective wooden frame – this may have been constructed because ships moored here were subject to the violent stream coming from the adjacent sluice. This protective screen was removed as part of the harbour improvements in 2006. The quay has a ‘scalloped’ plan this made the berthing of ships more economical as they could overlap the bowsprits of the sailing ships.

</tbody>
</table>

**History:** There are at least three distinctive phases to the development of North Quay. About 1740 Merchant Curnow and partners developed the western end of the quay – it was taken over by the Cornish Copper Company about 1780 who extended the quay, making further extensions (to the pattern we see today) in the early part of the 19th century.

**Significance:** International/National.

**Baseline Condition:** poor to good.

**Proposals:** Repair and retain.

**Necessity:** The condition of parts of the harbour wall require repair to ensure safety and survival.

**Gain/Loss:** This is a positive step that will enhance the structure and the Conservation Area.

**Justification:** The positive nature of the proposals.

**References:** 2, 6, 18, 19, 20, 21

<td>Steps looking NE</td>
<td></td>
</tr>
</tbody>
</table>

History: Little appears to be known about the steps – a path is shown on the 1877 OS map and definitely steps on the 1907 OS map. However that fact that they are made out of scoria suggests an earlier date, as it was the Copperhouse Company who appeared to be the company that used the copper slag as a building material.

Significance: Local: an unusual use of scoria blocks.

Baseline Condition: Fair to Good.
Proposals: To be left as found.
Necessity of change: There will be no change.
Gain/Loss: Neutral.
Justification: There is no justification necessary.

</tr>
<tr>
<td>DSCN 2543</td>
<td>Ditto looking NE</td>
<td></td>
</tr>
</tbody>
</table>

There are a number of photos of track entering the Quarry area

See section on Wharf Railways – see NQ16.

**History:** The lifeboat station was built approximately on this site in 1866 in a former quarry owned by the Copperhouse Company; the first boat was a gift of the University of Oxford. The station was closed in 1920 and was then used by the Esso oil company as a storage area until the 1960s. Today it provides a ‘lock-up area’ for the local fishermen.

**Significance:** Local.

**Baseline Condition:** Not totally determined at this point.

**Proposals:** To create a surface car park.

**Necessity:** There is a need for car parking and this area is regarded as suitable for this purpose.

**Gain/Loss:** The overall gain is the benefit to the scheme in general terms, there is little to be lost in terms of historic features, archaeological investigation will determine whether there is any of interest on the site.

**Justification:** The overall benefit to the scheme against the possible loss of remains that are regarded as of low significance.

Structure Type: Site

Dates: 1813

Description: There is nothing above ground to see, except the ground concrete floor of a later building.

Photographs

<table>
<thead>
<tr>
<th>Photo No</th>
<th>Object and orientation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No photograph</td>
<td></td>
</tr>
</tbody>
</table>

History: The Britannia Inn was built in 1813 by the Copperhouse Company – it become the Steam Packet Inn at one time. The building was demolished in 1863 and a structure was built on the footplate the ground platform of this latter building can still be seen.

Significance: Low local: there is likely to little left of the Inn.

Baseline Condition: Unknown – part of the hidden archaeology of the area.

Proposals: The area is to be developed and will involve excavation of depth greater than 2 metres. This will involve the loss of the foundations of the Inn.

Necessity: The work is required as part of the development of the Harbour area.

Gain/Loss: The loss of the footplate of the building which is regarded as of low importance against the gain of the general improvement of the area.

Justification: The loss is balanced against the general advantage that the scheme brings to the area.

</tbody>
</table>

History: The stables to the former Britannia Hotel that stood close by. Although there have been suggestions that it was dock offices (CAU 1995). The shed was added in the middle part of the 20th century purpose unknown.

Significance: Local: one of the few buildings of any age left on North Quay.

Note: This is a listed structure and is also subject to a separate listed building application and a detailed justification within the PPG 15 Statement that accompanies the Outline Planning Application.

Baseline Condition: Poor.

Proposals: Retain as found – to look at future integration into the next phase of the proposed development.

Necessity: Keeping the structure with a view to incorporating in a newer building is the best option giving the desire to keep the listed building given its poor condition.

Gain/Loss: This is neutral at this point

Justification: A final decision on the long term fate of the structure cannot be determined at this time as the final detailed plans have yet to be determined.

</tr>
</tbody>
</table>

**History:** The first railway entered the town via what is now the King George V Memorial Walk which was bypassed when the lines were connected to the West Cornwall Railway at the present Hayle Station in 1852. The wharf lines from 1852 entered North Quay from the main line via the bridge at Copperhouse Creek (SB1). Although steam was used on both the main and branch lines the majority of the shunting was done by horse right up to the closure of the Wharf Railway in 1963.

**Significance:** Regional: the railway was an important part of the dock infrastructure.

**Baseline Condition:** Not yet totally determined.

**Proposals:** The greater part of the old railway will be removed. A portion may remain as hidden archaeology when a new surface and flood protection are established in the area.

**Necessity:** The loss of the greater part of the railway tracks is because of the need to establish flood protection and to resurface the quay.

**Gain/Loss:** There will be the loss of the greater part of the railway structure.

**Justification:** The removal or reburial of the railway is both strategically and economically necessary for the success of the proposed development. Further justification is contained in the PPG 15 Statement that accompanies the Outline Planning Application.

</tr>
</tbody>
</table>

---

**History:** The site of a building purpose unknown shown on the 1877 OS map before that date there were ore hutches.

**Significance:** Local: the use of the scoria blocks suggests that the structure pre-dates the Harvey takeover of the Copperhouse Company which adds a little interest to the site.

---

**Baseline Condition:** Unknown.

**Proposals:** The area is to be developed and excavations will be more than a metre which will destroy any remains – if they still exist.

**Necessity:** The work is required as part of the development of the Harbour area.

**Gain/Loss:** This harbour feature will be lost the record of the feature is a gain.

**Justification:** The loss is balanced against the general advantage that the scheme brings to the area.

---

**Structure:** Chemical Works  
**Location:** North Quay  
**Grid Ref:** SW 5550 3795  
**Statutory Protection:** Within Conservation Area  
**Our Ref:** NQ19  
**CAU Ref:** 140  
**PRN No:** 40363

**Structure Type:** industrial site/hidden archaeology

**Dates:** 1939/40

**Description:** The site of the works was extensive and incorporated the calcining works. Today there is little on the site. The calcining works is a yard for a sand and topsoil extraction works. The rest of the site is occupied by three buildings. The two that stand on the North Quay and the other is on the cliff face – these have separate entries. There is also part of the original boundary fence and the rail lines that ran into the plant.

</thead>
<tbody>
<tr>
<td></td>
<td>Ariel Photographs in Historical overview section</td>
<td></td>
</tr>
</tbody>
</table>

**History:** The Plant was opened in 1939/40 as a Bromide extraction plant. The Bromide was used as a fuel additive to retard ‘knock’ in fighter aircraft. As such it was seen as extremely important as one of the only plants making the extract. During the 39 – 45 War it was a top-secret factory and heavily guarded by anti-aircraft batteries etc. The works were owned by the British Government but operated by British Ethyl Corporation [later known as Octel, ICI owned 50% of the Company]. Sulphuric acid was one of the major ingredients to the process, which led to a sulphuric acid plant being added in 1954. There was a discharge at the sluice to the north of the Custom House which is said by locals to have sterilised the water and affected the fishing. Production of sulphuric acid finally finished in 1968.

**Significance:** Regional: this site is a significant part of the later story of Hayle and an understanding and interpretation is needed before its final fate is decided.

**Baseline Condition:** Unknown at this point.

**Proposals:** To build on the site.

**Necessity:** The economic viability of the proposed development.

**Gain/Loss:** The loss will be any remains of the plant that may remain underground; the gain is an understanding of the site from below ground investigation.

**Justification:** The viability of the proposed development – see further justification in PPG 15 Statement that accompanies the Outline Planning Application.

</table>

History: The works was established in the late 19th century and was being used to extract arsenic during the last years of the calcining process. The plant was converted to making glass in 1917 (Pentewan Glass Works) but this proved to be unsuccessful and the plant was closed in 1925. (The main reason for the failure appears to be the nature of the local sand, which could not produce clear glass.) The site of the plant became part of the Bromide Octel works in 1939.

Significance: Negligible: as the site of a calcining works or as a glass factory it was taken over by the chemical works therefore its significance as a site is negligible.

Baseline Condition: Unknown.

Proposals: This area is part of the development of the harbour and excavations will be greater than 2 metres which will destroy any hidden archaeology.

Necessity: There is a need to excavate the site as part of the development of the area. (See note on hidden archaeology in the PPG 15 Justification Statement that accompanies the Outline Planning Application.)

Gain/Loss: There is a positive advantage to be gained from the excavation of the site in the knowledge acquired and record made of this important site, there will be a loss of the physical remains.

Justification: The loss is balanced against the general advantage that the scheme brings to the area.

References: 1, 2, 3, 20, (Brian Sullivan)

2 Calcining was the process of extracting water from ore, to reduce its weight, before it was shipped to the processing plants.

Structure Type: Site

Dates: mid 19th century

Note and description: The Cornish Archaeology Unit have identified three sites of building at the north west end of the North Quay – there is little evidence of them today except the one at east end of three site where there is evidence of the partition of a structure. (Grid Ref SW 5541 3788). There is a line of concrete pads with the remains of 15-H section columns – these start at 3 metres from the Quay edge and continue at 1.25 metre intervals. But these are almost certainly part of a later building than the ones identified by the Unit. The site today is mainly concrete and was the site of the coal store for the Power Station during the 20th century. (See Gazetteer Map.)

</table>

History: Built as part of the Power Station complex
Significance: Low local; the building means little out of context.

Baseline Condition: Unknown
Proposals: The area is to be developed and excavations will be more than a metre which will destroy any remains – if they still exist.
Necessity: The work is required as part of the development of the Harbour area.
Gain/Loss: This harbour feature will be lost the record of the feature is a gain.
Justification: The loss is balanced against the general advantage that the scheme brings to the area.

**Structure Type:** Building  

**Note:** The Archaeology Unit’s reference 548 is to both the existing Distribution Station and the remains of the Power Station that lay to the east. There are three separate references to these remains.

**Dates:** c1930s  

**Description:** Substantial buildings a major point of electricity distribution.

**Photographs**

**History:** The sub-station appears to be part of a distribution network and probably dates from the establishment of the national grid it has been enlarged since that time.

**Significance:** The substation position was probably established because of the power station; therefore its position is only coincidental to the industrial harbour.

**Not part of the scheme.**

3.8. Cockle Bank

**Structure**: Warping Posts  
**Location**: Cockle Bank  
**Grid Ref**: SW 5557 3761  
**Statutory Protection**: None  
**Our Ref**: CB1  
**PRN No**: None  
**CAU Ref**: None  
**Other**:

**Structure Type**: Harbour Installation  
**Dates**: Early 19th century  
**Description**: Posts with support topped with a chain and hook – there are two one at each end of the bank. Both posts are in very bad condition.

**Photographs**

</tr>
</tbody>
</table>

**History**: Manoeuvring sailing vessels in the confines of the estuary, especially if the tide was running strong was difficult. The post was placed at each end of the Cockle Bank to aid ships to swing round the edge of the bank.  
**Significance**: Regional: their significance is high but they are unlikely to survive where they are and their story is best told by removing them to a healthier environment.

**Baseline Condition**: Very poor.  
**Proposals**: To leave as found (There is a possible need to ensure a protection of its position once the Cockle bank is removed.  
**Necessity**: The removal of the Cockle Bank may undermine the post and added protection therefore might be needed.  
**Gain/Loss**: The retention of this historic feature in situ is a positive gain.  
**Justification**: Will enhance the historic harbour.

Structure: Channel Marker

Location: Cockle bank

Grid Ref: SW 55373781

Statutory Protection: Within Conservation Area

Structure Type: Harbour Installation

Dates: Early 19th century

Description: Channel marker possibly an old ship’s mast, it is in very poor condition.

</tbody>
</table>

History: The marker was placed to indicate the position of the sandbank to shipping evidence of chains on the post suggest it may have been used as a warping post as well.

Significance: Regional.

Baseline Condition: Very poor.

Proposals: To remove.

Necessity: The removal of the Cockle bank will make the position of this feature untenable and its condition precludes it being moved.

Gain/Loss: An overall loss.

Justification: The difficulties involved in conserving this feature and its relative low status weighed against the overall gains of the scheme.

History: There are the reported sites of four ships that foundered on or near the Cockle Bank:
- Cargo Ship, ‘Unity’ in 1782
- Cargo Vessel, ‘Friendship’ in 1807
- Cargo Vessel, ‘Ocean’ in 1827
- The Craft, ‘Fanny’ in 1810

Significance: The extent of the wrecks is unknown it is only a potential archaeological site

Baseline Condition: Unknown

Proposals: The removal of the cockle bank will obliterate any remains.

Necessity: The removal of the bank is an essential part of the proposed development hence the loss of any possible remains.

Gain/Loss: The possibility of losing any hidden archaeology is extremely low. (See note on hidden archaeology in the PPG 15 Justification Statement that accompanies the Outline Planning Application.) There is the possibility that artefacts may be found during the removal of the bank.

Justification: It is extremely unlikely that anything other than the possibility of some artefacts have survived the effect of strong tides and the scouring of the harbour. No evidence was found during the investigation of the bank. The removal is balanced against the benefits that the scheme brings to the area.
